

CLAIMS:

1. A disc comprising a substrate layer that comprises a support plate and a registration layer connected to the support plate, characterized in that a protective plate is located at the side of the registration layer remote from the support plate, which protective plate can be detachably fastened to the substrate layer.
2. A disc as claimed in claim 1, characterized in that the support plate has the shape of a disc and is provided with at least one raised edge extending upwards from a circumferential edge, by means of which the protective plate can be detachably fastened.
3. A disc as claimed in one of the claims 1 and 2, characterized in that the protective plate can be magnetically fastened to the substrate layer.
4. A disc as claimed in any one of the preceding claims, characterized in that the protective plate can be fastened to the substrate layer by means of interlocking shapes or force connections.
5. A disc as claimed in any one of the preceding claims, characterized in that the substrate layer can be inserted into a protective element which comprises at least the protective plate.
6. A disc as claimed in any one of the preceding claims, characterized in that at least an outer circumferential edge of the substrate layer or of the protective plate is provided with a groove.
7. A disc as claimed in any one of the preceding claims, characterized in that the registration layer is provided with a covering layer at a side facing away from the support plate.
